

ACCESS RESTRICTIONS

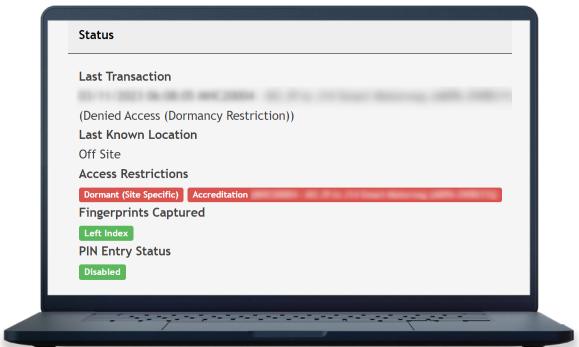

Dormancy

Dormancy restriction is applied on a **site-specific** basis. The **dormancy** indicates that the worker has not been on site for a specific period of time.

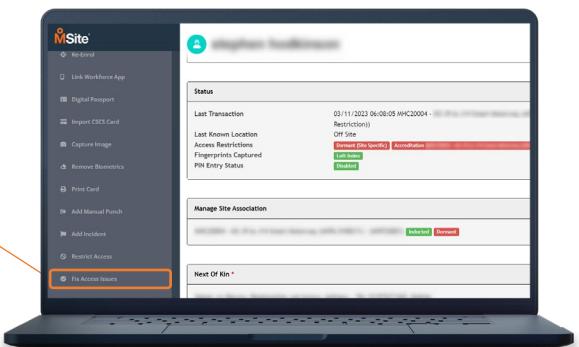

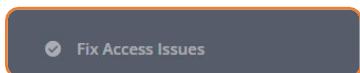

Fix Dormancy Restriction

To check this.

Find the **workers profile** in MSite. The Status bar will indicate if the worker has a dormancy restriction.

On the lefthand side of the workers profile, there will be a tab called, **Fix Access Issues**, select this.

A **Fix Access Issues** box will open. **Tick** to remove the dormant restriction and select **remove**.
