# MSITE SOCIAL VALUE

Introduction to Social Value with MSite

Within the **MSite** system you have access to a host of **reports** relating to the **Social Value** aspect of the construction industry.

Social Value Reports

To access these, select **Sustainability** from the **MSite toolbar**. Here, you can select reports such as:

- **Worker Breakdown** – Shows a breakdown of the number and percentage of workers per Site/Contractor with filters for: Area Code, Ban Status, Distance from Site and Method of Transport.

- **Worker Statistics** – Shows a breakdown of all custom data entered in the system with filters for Site, Contractor, Borough, Area Code, Workforce as well as Custom Fields such as: Diversity Monitoring and Personal Details for example.

- **Local Labour** – Shows the number of Workers within each distance bracket and the number of days worked by them per site and per contractor.

- **Local Labour Breakdown** – View worker details such as Postcode, CSCS Number and Start Date broken down with filters for Site, Contractor and Advanced options like Currently On or Off site etc.

Worker Travel to Site Carbon Emissions
Site Delivery Carbon Emissions
Site Delivery Carbon Emissions Summary

- **Worker Travel to Site Carbon Emissions** – This report shows the approximate Carbon Emissions that a worker generates traveling to site, using the information within the worker profile as the formula.

- **Site Delivery Carbon Emissions / Summary** – Will show a summary of the Carbon Emission data captured when using the MSite Delivery Management features. This uses the information entered by the contractors relating to type of vehicle and the distance To/From site.*

*The **Site delivery Carbon Emissions** and the **Summary Report** will only be applicable if using the **MSite Delivery Management** feature.
