

Face Mini Single Sign On. (SSO)

How to perform a Manual Sync of the Face Mini.

Single Sign-On (SSO) is an authentication method that enables users to **securely authenticate** with **multiple** applications and websites by using just one set of credentials. This feature is available for the **MSite Face Mini**. If your business uses **SSO** the way you log in will be different.

The **Face Mini** log in page now displays **SSO** as a sign in option.

If **SSO** is enabled for your business, the **SSO** sign in option will highlight, once a **valid email** address is entered.

If using **Microsoft Authenticator**, you will be required to submit your password for the account.

You will now be required to complete your **authentication** by entering the **number** shown on screen, into the **Microsoft Authenticator** app.

Then, **confirm** the authentication number to sign in. Once authenticated, you will be **logged in**.
