

# Supervisor App – Offline Operation.

Some features of the **MSite Supervisor App** support **offline operation**, meaning they can be used while there is **no internet connection** available.

In this case, the app will attempt to send any data **collected since the previous sync** to the website.

The features that support **offline operation** are as follows:

Feature	Offline Mode Supported
Time & Attendance	Yes
Briefings	Yes
Skills Check	Yes
Scan QR Code	No
Workers	No
Roll Call	No

**Please Note:** If you have been using the Supervisor App **offline**, ensure you perform a **sync** with an internet connection **BEFORE** logging out of the app, otherwise all data collected offline will be **LOST**.

Users will be notified if they have **un-synced** items in the following ways:

- **Sync status** indicator will appear red and display total count of un-synced items
- Amber **warning message** when signing in workers when offline
- **Pop-up message** when searching worker profiles
